## **DETAILED ACTION**

### ***Response to Amendment***

1. In response to the office action from 6/13/2005, the applicant has submitted an amendment, filed 7/15/2005; amending claims 10 and 16-17, while adding claims 24-25 and canceling claims 1-9 and 11-15. Due to the claim amendments, claims 10 and 16-19, and 22-25 are allowable over the prior art of record for the reasons given below.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. \

Authorization for this examiner's amendment was given in a telephone interview with Joseph Kelly on 7/26/2005.

3. The application has been amended as follows:

**Cancel claims 20 and 21.**

**Change "the method of claim 21" in claim 22, line 1 to --the method of claim 19--.**

*Allowable Subject Matter*

4. **Claims 10, 16-19, and 22-25** are allowable over the prior art of record.

5. The following is an examiner's statement of reasons for allowance:

With respect to **Claims 10 and 24**, the prior art of record fails to explicitly teach or fairly suggest a method for proposing subsequent text segmentation when a word boundary within a token (*a group of text characters flanked by white space*) is determined to be invalid by a linguistic knowledge component comprising lexicon lookup and morphological analysis operations, wherein proposing subsequent segmentations is an iterative process which analyzes an invalid token by first checking for multiple punctuation character strings or emoticons and segmenting the invalid token based on the detected punctuation strings or emoticons, then checking for punctuation marks and segmenting the invalid token based on a precedence hierarchy of punctuation, based on the binding properties of punctuation, if punctuation marks are detected, and finally detecting alpha and numeric characters within invalid tokens and segmenting the invalid token based on alpha-numeric character boundaries if alpha and numeric characters are detected within a proposed token. After the process of further segmenting proposed tokens, the created subtokens from the steps noted above are submitted to the linguistic knowledge component comprising lexicon lookup and morphological analysis operations for validation and the aforementioned steps are repeated until a valid token is obtained if a token is once again found to be invalid.

Art Unit: 2655

Other pertinent prior art includes Chanod (*U.S. Patent: 6,269,189*), which teaches repeated text segmenting until a valid token is found (Fig. 5), however new tokens are found by adding a next text character to a proposed token. In other words, Chanod does not teach subsequent segmentation *within* a proposed token utilizing emoticons, punctuation strings, punctuation according to a precedence hierarchy, and alpha-numeric strings.

The dependent claims further limit allowable independent claims, and thus, are also allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
